

Resume

Name- Komal Barhate

barhate.komal12@gmail.com | Jalgaon, Maharashtra | github.com/komallbarhate | linkedin.com/in/komal-barhate

OBJECTIVE

Engineering student focused on building real-world, scalable applications using full-stack development and AI. Passionate about solving practical problems and deploying functional systems that deliver measurable impact.

EDUCATION

Bachelor of Engineering (Pursuing) — Computer Engineering (Data Science) *Expected 2028*

Vidyavardhini's College of Engineering and Technology, Vasai West

TECHNICAL SKILLS

Languages: Python, HTML, JavaScript

Frameworks & Tools: Git, GitHub, VS Code

EXPERIENCE

Web Development Intern — Prodigy Infotech

- Currently interning as a Web Development Intern, working on practical web projects and gaining hands-on industry experience.

Sub Admin Head — Literati Club, VCET, Vasai West

- Managed documentation, official reports, and event registrations.
- Drafted official communications and administrative documents for the club.
- Coordinated event workflows and operations across teams.

PROJECTS

MedEase – Hospital OPD Management System medease-923t.onrender.com

- Built a full-stack OPD system using Flask and SQLite for end-to-end hospital workflow management.
- Patient appointment booking with live queue tracking and real-time status updates.
- Integrated UPI QR-based payment system for seamless in-app transactions.
- Admin dashboard for monitoring appointments, operations, and analytics.
- Implemented AI chatbot (MedBot) for patient assistance and symptom triage.

Digital Image Tampering Detection tamper-detect-7k6eruarzxxgrza8sftgt9.streamlit.app

- Detects suspicious edits in digital photos using image forensics based on statistical analysis.
- Scores images and highlights regions where compression appears inconsistent, often indicating pasted content, heavy retouching, or re-saved regions.
- Built with Python and deployed on Streamlit for accessible, browser-based forensic analysis.

sciFI Vital Signs Anomaly Detection

- Python project for ICU vital-sign anomaly detection from time-series data.
- Pipeline reads vital-sign time series, engineers anomaly-focused features, and runs an anomaly detection model.
- Generates a structured submission file in case_id, time_sec, anomaly_score format for downstream evaluation.
